

- 1) In your personal H:\ drive, create a project folder called **workedup**.
- 2) Create a logo for the workedUp company.
 - a) Access <http://www.designmantic.com/>.
 - Click on **Logo Design** and click on **Skip**
 - Enter **workedUp** as a company name, select an industry (e.g. Home & Garden) and click **Show My Designs**.
 - b) Select a logo, for example:

- c) Right-click on it and save it in your workedup project folder as **workedup_logo.png**.
- 3) Create the layout for the head of your Web site.
Open Notepad++ and create a new document.
Type in the code shown on the following page.

headfile.html

```
<!--HTML document to define the layout of the head and the navigation bar-->

<div id="container">
  <div id="header">
    <a href="index.php"><img src=workedup_logo.png></a>
    <h1><?php echo date('d F Y H:i:s');?> </h1>
  </div>

  <div id="navigation">
    <ul>
      <li><a href="index.php">Index</a></li>
      <li><a href="basket.php">My Basket</a></li>
      <li><a href="register.php">Register</a></li>
      <li><a href="login.php">Login</a></li>
    </ul>
  </div>

  <div id="content">
```

- 4) Save this file in **H:\workedup** as **headfile.html**. When you save it, make sure you select **Save as type: Hyper Text Mark Language File**.
- 5) Create the layout for the foot of your Web site. Create a new document in Notepad++ and type in the following code.

footfile.html

```
<!--HTML document to define the layout of the foot-->

</div>

<div id="footer">
  Copyright workedUp, 2018
</div>
```

- 6) Save this file in **H:\workedup** as **footfile.html**. When you save it, make sure you select **Save as type: Hyper Text Mark Language File**.

7) Create the external style sheet for your Web site in CSS. Create a new document in Notepad++ and type in the following code.

mystylesheet.css

```
/*External CSS to format the layout of my web site*/

#container
{
    margin: 0 auto;
    width: 70%;
    background: #F8F8F8;
    font-family: verdana, sans serif;
    border-style: solid;
    border-color: #9E9EAE;
}

#header
{
    background:#FFF;
    padding: 5px;
}

#header h1
{
    margin: 0;
    color:      #008F6B;
    font-size: 90%;
    text-align: right;
}

#navigation
{
    float: left;
    width: 100%;
    background:#9E9EAE;
}

#navigation ul
{
    margin: 0;
    padding: 0;
}
```

mystylesheet.css (continued)

```
#navigation ul li
{
    list-style-type: none;
    display: inline;
}

#navigation li a
{
    display: block;
    float: left;
    padding: 5px 10px;
    color: #fff;
    text-decoration: none;
    border-right: 1px solid #fff;
}

#navigation li a:hover
{
    background: #008F6B;
    color: #fff
}

#content
{
    clear: left;
    padding: 20px;
}

#content h2
{
    color: #008F6B;
    font-size: 110%;
    margin: 0 0 .5em;
}
```

mystylesheet.css (continued)

```
#footer
{
    background:#9E9EAE;
    text-align: right;
    padding: 20px;
    height: 1%;
    color: #fff;
}

a:link
{
    color: #008F6B;
    text-decoration: none;
}

a:active
{
    color: #3366FF;
    text-decoration: none;
}

a:visited
{
    color: #3366FF;
    text-decoration: none;
}

a:hover
{
    color: #7A7ACC;
    text-decoration: none;
}
```

Please note that on this next page all the codes preceded by a # sign (such as: #008F6B) are HTML colour codes. Please feel free to change them to the colour that you like. You can find a list of all available colours on http://www.w3schools.com/html/html_colornames.asp

8) Save this file in **H:\workedup** as **mystylesheet.css**. When you save it, make sure you select **Save as type: Cascade Style Sheets file**.

- 9) Create the template for your Web site by putting together the head layout, the foot layout and the external style sheet. Create a new document in Notepad++ and type in the following code.

template.php

```
<?php
//create a variable called $pagename which contains the actual name of the page
$pagename="Template";

//call in the style sheet called ystylesheet.css to format the page as defined in the style sheet
echo "<link rel=stylesheet type=text/css href=mystylesheet.css>";

//display window title
echo "<title>".$pagename."</title>";
//include head layout
include ("headfile.html");

echo "<p></p>";
//display name of the page and some random text
echo "<h2>".$pagename."</h2>";
echo "<p> Text Here";

//include head layout
include("footfile.html");
?>
```

- 10) Save this file in **H:\workedup** as **template.php**. When you save it, make sure you select **PHP HyperText Preprocessor file**.
- 11) Access WinSCP, the Secure FTP Client, to connect to the Web Server [see Guide to Access the Web Server (using SSH)]. In your **public_html** folder (right window pane) create a folder called **workedup**.
- 12) Using WinSCP drag all the files you have just created **template.php**, **headfile.html**, **footfile.html**, **mystylesheet.css** and **workedup_logo.png** from **H:\workedup** (left window pane) and drop it into the **public_html\workedup** folder (right window pane).
- 13) Open a Web browser and type in <https://yourWestminsterUsername.users.ecs.westminster.ac.uk/workedup/template.php>. You should be able to see this:
